ABOUT ME

My objective has always been to work in an environment where technical skills and creative endeavor function harmoniously in delivering a useful product or service to the end user.

I have 12+ years of working with both front-end and back-end programming. Currently based in Wicklow/Dublin, I work as a full stack developer for Sentient Solutions where my role is to lead the ongoing development of Scorebuddy, Flightbuddy and Surveybuddy; three successful cloud based technologies. I am highly motivated, take great pride in the quality of my work and I love to turn innovative ideas into great products.

I am a multi-disciplined developer, with an equal knowledge of both the back-end technologies and user interface/experience methodologies involved in successful software production. I am happiest when developing a web service that is both powerful and simple to use.

Current stack:
PHP, MySQL, JavaScript, HTML5, SCSS, GIT, AWS

Other skills:
Agile Development, UX Strategy, Balsamiq, Adobe PS/AI

HOBBIES

When not working, I like to keep busy. Currently, you're most likely to find me learning about React, Vue.js, Machine Learning, TypeScript and other new technologies.

When not at my computer - I enjoy cycling, skateboarding, beer brewing, listening to music and spending time with my two daughters.

SKILLS AT A GLANCE

PHP
MySQL
Javascript
Vue.js
JQuery
CSS/SCSS
